

The ENVA logo is positioned in the top right corner of the page. It consists of the word "enva" in a lowercase, green, sans-serif font. The background of the entire page features a photograph of a person's legs and feet wearing blue protective overalls with reflective white stripes and brown work boots, standing in a dark, reflective liquid spill on a concrete surface. A large, curved grey shape separates the top white area from the bottom photograph.

Spill Kits for Oil and Chemical Waste

Spillages need to be contained and cleaned up as quickly and safely as possible. We have the equipment to allow you to do just that. Our spill kits will provide you with what you need to contain leaks and spills with a range of absorbents products.

Spill kits should be kept within easy access anywhere where significant quantities of hazardous liquids or chemicals are used within customers premises. In emergency situations it is vital to be able to react quickly.

These spill kits come in different sizes so they can be stored in various locations around a site meaning that when the need arises, you will never be too far from the correct equipment to contain a spill.

Enva offers a range of environmental products that offer excellent solutions to leakages, spills and overflows.

Small Spill Kits

Small Spill Kit comprising of:

- 1 Yellow PVC bag with Shoulder Strap
- 30 Absorbent Pads
- 4 Absorbent Socs
- 1 Carton of Safety Sorb
- 1 x PPE Kit
(Goggles, Gloves, Warning Tape and 2 x Disposal Bags)

Absorbent Pads & Booms

240 & 660 Litre Spill Kits

	240 Litre	660 Litre
Absorbant Pads*	100	400
Booms*	2m x 1m	(2) 3m x 20cm
Absorbent Granules	✓	✓
Warning Tape	✓	✓
PPE - Oil Spec Gloves	✓	✓
PPE - Safety Glasses	✓	✓
PPE - Tyvec Suit	✓	✓
PPE - Disposable Respirator	✓	✓

Absorbents, pads and booms can be purchased separately to replenish Spill Kits.

Secondary Containment

Secondary containment such as sump pallets and trays are an integral part of drum storage. By holding accidental leaks and spills they prevent harmful liquids from coming into contact with surfaces, other chemicals and members of your workforce. Rather than spreading, substances are caught and secured beneath the drum until they can be safely cleaned away. This is not only environmentally friendly but also cost-effective and limits the waste created by a leaking drum.

Made from 100% moulded polyethylene IBC bunds are fully compliant with regulations and are suitable for corrosive chemicals.

IBC Bunds

Optional deck / platform.

Drum Spill Pallets

Options include 2 or 4 drum spill deck.

1100 Litre IBC Bund

2 Drum Spill Deck

1100 Litre IBC Bund (double)

4 Drum Spill Deck

Sizing information available on request.

Drip Trays for Chemicals

Drip Trays for Chemicals

- Moulded Plastic Drip Trays for storage of small containers or to be placed under leaks.
- Corrosion resistant.

Model	Dimensions (mm)	Capacity	Pack Size
Tray 1	410mm w x 310mm d x 45mm h	5 litres	5
Tray 2	790mm w x 400mm d x 45mm h	12 litres	5
Tray 3	1000mm w x 400mm d x 45mm h	15 litres	5

Covered Bunded Units

Covered Bunded Units

High strength welded steel construction. Steel zinc coated/galvanised. No sharp edges/protrusions. Suitable for internal or external use. Useful for customers who store oil in containers and store these outside.

- 2 x 200 litre Drums
- 300 mm deep shelf for smaller containers
- Clear space above drums allows usage of Drum Pumps
- Cabinet is fitted with Safety/Warning signage as standard.

Bunded Chemical Cabinet

Delivered to site fully assembled. Heavy duty welded tubular steel framework construction. Profiled metal wall and roof panels.

- Forklift pockets and roof lifting eyes
- Hazard / Warning Signs fitted to doors as standard.
- Wall mounted MSDS holder

Optional Extras:

- Shelf Grating (allows storage of non palletised Drums)
- Galvanized framework
- Polyethylene Bund for Highly Corrosive Chemicals.

For further information and lead times.

Bunded Waste Oil Tanks

A bunded tank is essentially a tank within a tank. The inner tank is the storage area for the oil and the outer tank provides a secondary area for containment in the event of a spill. To minimise the risk of pollution from an oil spill, nondomestic oil storage tanks above 200 litres should have secondary containment (a bund).

This can either be an integrally bunded tank, or a separate construction around the tank. The bund must be capable of holding 110% of the tank's contents.

1350 Litre

2000 Litre

2500 Litre

Sizing information available on request.

Tight Head Drum

Enva supply 205 litre UN approved tight head drums for the containment of waste.

IBC

Enva supply UN approved IBCs for the containment of waste. Petrol Spec IBCs available along with reconditioned IBCs.

Combi Drum

Enva provide 205 litre combi drums for the containment of waste.

Salvage Drum

Enva can supply Salvage drums for the overpacking of damaged or out of date drums. This avoids re-packing of dangerous substances from one container to another and allows the damaged/leaking/out of date drum to be lifted directly into a salvage drum.

For further information.

Reconditioned Packaging

Enva operates the only EPA licensed UN Approved Drum & IBC Reconditioning Facility in Ireland, offering our customers full traceability and peace of mind for their business.

Companies failing to use a licensed facility for IBC reconditioning services leave themselves open to the risks associated with residual materials when containers are reused. These residues may contain hazardous materials or dangerous products which can be toxic, oxidizing, explosive, flammable, corrosive or water reactive. In turn, these materials have the potential to render future products unfit for purpose or cause environmental issues. Worse still, they can find their way into the food chain which presents obvious health risks for livestock or humans.

Enva provides comprehensive package reconditioning and recycling services to the pharmaceutical, petrochemical, food and beverages sectors.

UN Approved Reconditioned Drums

Enva reconditions steel drums to UN approved standards, offering environmentally sustainable and cost effective solutions to our customers. The reconditioning process includes:

- **Triple Washing**
- **Reshaping and Dent Removal**
- **Steam Vacuuming and Shot blasting**
- **Leak Testing and Inspection**

Drums are then repainted with various customer colours and logos.

UN approved 200ltr
Tighthead Steel Drum for Liquid
Product or Waste

Un Approved Opentop
Steel Drum for Solids

UN Approved Reconditioned IBCs

Our UN approved reconditioned IBC range include 640lts, 1000lts and 1250lts clear bottle, UV bulk bottle and anti-static EX zones 1&2. The empty containers are all washed,

dried, and leak tested to original UN approved standards. Our IBC reconditioning services are designed to meet our customers' needs and can be supplied with steel, plastic or wooden pallets. They also come with a security foil seal and valve screw on all bottom valves for added security.

Recycling Services

Enva offers a recycling service for Plastics Drums, Steel Drums and IBCs that cannot be reused or reconditioned. This circular solution ensures that these commercially and environmentally valuable resources are not lost forever in landfills and at the same time avoids expensive disposal costs.
